

► PROJECT TITLE

Improving access and provision of essential, integrated, quality sexual and reproductive health and gender-based violence (SRH/GBV) services in the South and Port-Au-Prince

SITUATION AT A GLANCE

11 748 538

Haiti Current population estimate

5 920 665

Population of women and girls

1 539 373

Number of women of reproductive age (WRA)

412 916

Number of women of reproductive age (WRA) in *targeted communes*

16 516

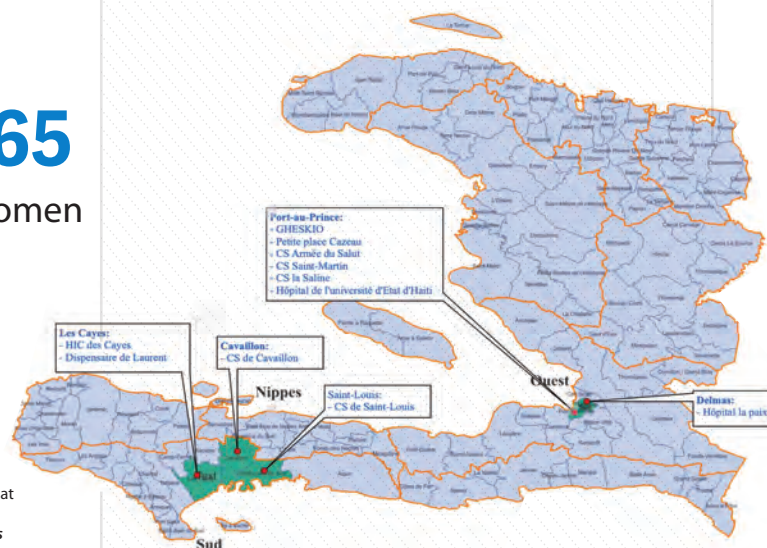

Number pregnant women in *targeted communes*

8 258

Number of women at risk of VBG in *targeted communes*

GEOGRAPHIC AREAS OF IMPLEMENTATION

OVERVIEW OF THE SITUATION

In 2021, Haiti experienced a profound deterioration of its political, socio-economic, security, and environmental context, resulting in increased humanitarian needs. Estimated at 4.4 million people in 2021, the number of people in need of humanitarian assistance in Haiti has increased to 4.9 million in 2022, or 43% of the total population.

The main factors behind this increase are: I) the earthquake of August 14, 2021, which affected 800,000 people living in the departments of Grand'Anse, South and Nippes, especially in terms of access to essential services and shelter; II) the conflicts between armed gangs in the metropolitan area of the capital, which have led to a significant increase in risks and cases of protection against the population, particularly cases of gender-based violence (GBV); III) the COVID-19 pandemic, which has had a lesser impact; IV) the hydrometeorological shocks that Haiti regularly experiences remain a threat to the country.

SEXUAL, REPRODUCTIVE AND GENDER VIOLENCE NEEDS

- Insufficient emergency obstetric and newborn care services for pregnant women
- Limited of multisectoral GBV response and prevention services
- Inadequate reference system
- Insufficient supplies for essential drugs, SRH commodities, and medical equipment
- Lack of trained staff to assist GBV survivors
